***Detailed Action***

***Restriction/Election***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16 and 22-28, drawn to a method and system for array design requiring both customer and vendor definition of array parameters, classified in class 702, subclass 19.  
If this Group is elected, then please also elect one of the species in the specie election requirement as stated below.
- II. Claims 17-21, drawn to a system for array design requiring only customer definition of array parameters, classified in class 702, subclass 19.
- III. Claim 29, drawn to a computer readable medium, classified in class 211, subclass 41.12.
- IV. Claim 30, drawn to a kit, classified in class 422, subclass 61.

**Specie Election Requirement for Group I:**

This application contains claims directed to the following patentably distinct species of the claimed invention:

For Group I:

Specie A: array design in which customer revision of data is doable

Specie B: array design in which customer revision of data is not doable

Applicant is required under 35 U.S.C. 121 to elect a single disclosed specie for prosecution on the merits to which the claims shall be restricted if no generic claim is finally

Art Unit: 1631

held to be allowable. The distinctness or independence of ability to revise data versus inability to revise data is because these two circumstances include different steps with different goals and are not required one for the other. Each of these usages is distinct as requiring distinct and different functions thereof without overlapping search due to different subject matter. This lack of overlapping searches documents the undue search burden if they were searched together.

Applicant is advised that a reply to this requirement must include an identification of the specie that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should an applicant traverse the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions in Groups I-IV are related as product and the process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for

Art Unit: 1631

using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the computer readable medium of Group III may be utilized in distinct usages as needed in Group I for a method and system for array design requiring both customer and vendor definition of array parameters, in a system for array design requiring only customer definition of array parameters as in Group II, in a kit as in Group IV, or alternatively, in a storage of pharmaceutical data. All of these usages are distinct as requiring distinct and different functions thereof without overlapping search due to different subject matter. This lack of overlapping searches documents the undue search burden if they were searched together.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1.
